

## Quick Guide: Make Your Own Landing Page (Super Easy!)

 Made for the AsafDevStudio Community 

### Step 1 – Start Fresh

Go to your Desktop → Right-click → New → Text Document.

Now rename it to **index.html** (important: the ending must be `.html`, not `.txt`).

### Step 2 – Open It Up

Right-click the file → choose **Open with** → Notepad (or VS Code if you have it).

### Step 3 – Copy-Paste This Code

```
<!doctype html>
<html>
  <head>
    <meta charset="utf-8">
    <title>My First Landing Page</title>
  </head>
  <body style="font-family: Arial; text-align: center; margin-top: 50px;">
    <h1>Welcome to My Landing Page</h1>
    <p>This is my first website — built with just one HTML file!</p>
    <a href="https://google.com"
      style="display:inline-block;padding:10px 20px;background:#38bdf8;
      color:white;text-decoration:none;border-radius:8px;">
      Click Me
    </a>
  </body>
</html>
```

### Step 4 – Open in Browser

Save the file (**Ctrl + S**).

Now just double-click it → and boom  your page shows up in Chrome/Edge.

### Step 5 – Make It Yours

 Change the `<h1>` text to your own title.

 Edit the `<p>` with your description.

🎯 Swap the link in ``<a href>`` with anything (like your WhatsApp or Instagram).

That's literally it — in 5 minutes you've got your own landing page working right from your PC 🎉.

🚀 Have fun building, AsafDevStudio fam! 💎
